COURSE OBJECTIVES	NextGen Entrepreneurship course uses a Challenge-Based Learning approach to guide students in identifying and framing real-world challenges in urban and global contexts, then leveraging empathy mapping, critical analysis and iterative prototyping to generate user-centered innovations. Through a structured progression from ideation to strategic planning, learners will translate creative solutions into viable business models that integrate sustainability principles, circular-economy practices and measurable social impact. By applying digital tools and research methods, they will assess feasibility and refine their concepts against market, ethical and triple bottom line criteria. Finally, students will develop adaptive leadership and communication skills - crafting and delivering multi-format pitches, setting SMART goals and collaborating across cultures - so they can confidently launch, manage and scale ventures that balance profitability with social and environmental responsibility.
