From Bologna Study Visit to the Official Launch of our E-learning Platform!

The REBUILD Consortium is proud to share the latest milestones in our journey toward the sustainable reconstruction of Ukraine, Georgia, and Moldova. This period has been marked by intensive collaboration, international exchange, and the finalization of our primary digital tools.

Looking back: Strategic Study Visit in Bologna

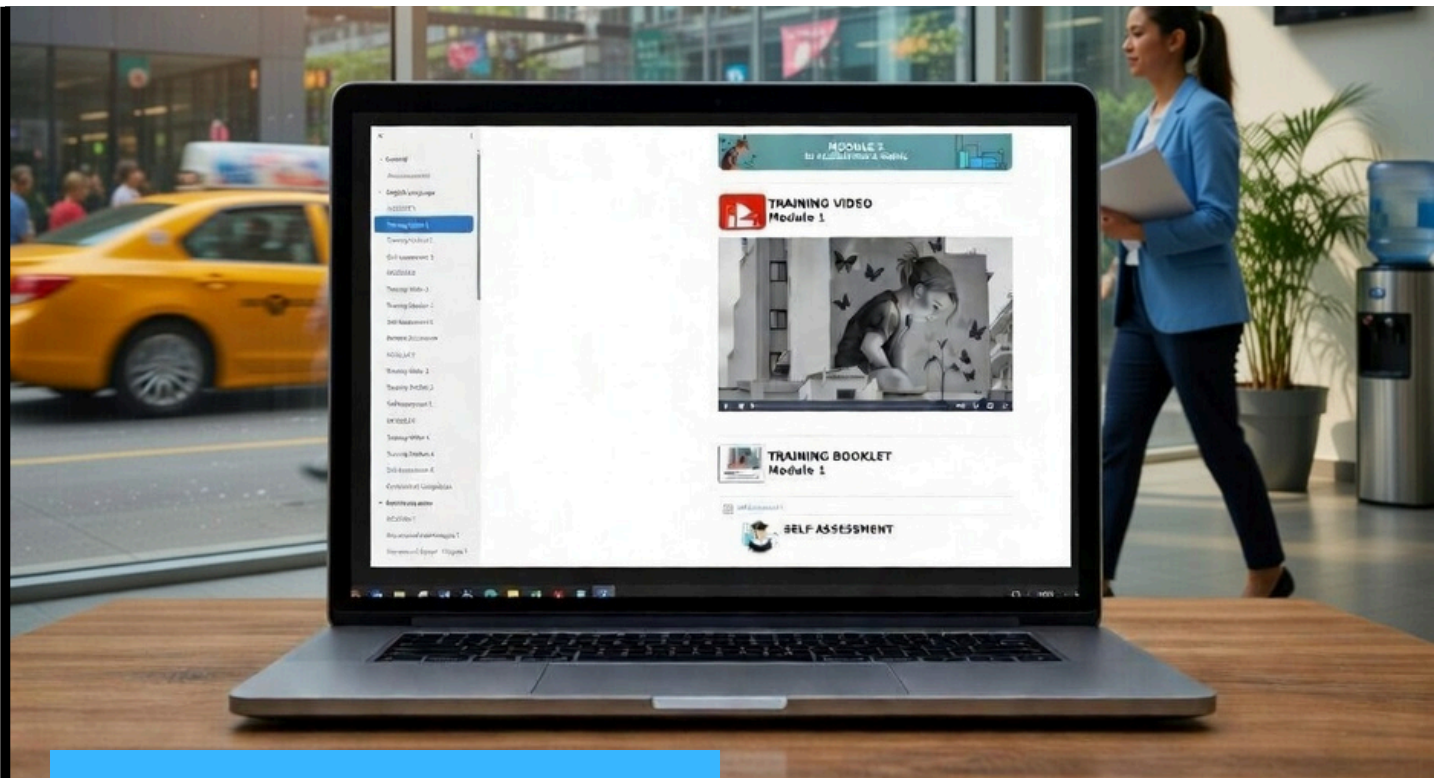

To ensure our training materials meet the highest European standards, the REBUILD project team recently gathered for an intensive Study Visit in Bologna, Italy. Hosted by our project coordinator, IIPLE Bologna, this visit was a cornerstone of our development process, allowing us to:

- Exchange expertise in green building and sustainable urban planning
- Visit world-class construction sites and research facilities to see innovation in practice.
- Finalize the curriculum for our training modules, ensuring they are practical, modern, and impactful.
- The insights gained from our Italian partners have been directly woven into the educational resources we are officially releasing today.

The REBUILD team in Bologna!

We finalized the curriculum to ensure our modules meet the highest EU standards.

The REBUILD E-learning Platform is Ready for Testing!

Current Phase: Pilot Testing To ensure the highest quality and a seamless user experience, the platform has now entered its official testing phase. Currently, a selected group of 40 teachers from our target countries is piloting the system.

Public Launch: October 2026 While the platform is fully developed, we want to ensure everything is working properly before "going public." Therefore, the platform will be available to the general audience immediately after the pilot action concludes at the end of September.

What the platform offers:

- **Module 1:** EU Regulations & Norms
- **Module 2:** Economic dimension / how to deal with EU calls and tenders
- **Module 3:** Re-Building Techniques
- **Module 4:** Digitalisation in building & construction.

Multilingual User Manuals Available

In preparation for the full launch, we have finalized the User Manual (Deliverable 3.3). This guide is available in English, Ukrainian, Georgian, and Romanian, and will be released alongside the platform to help all future users navigate the system effectively.

Thank you for being part of this international mission to rebuild a more sustainable and resilient future.
