Cluj-Napoca, 07.08.2026

To whom it may concern,

On behalf of the Management Board of **Alexandru Borza Technological High School, Cluj-Napoca**, we are pleased to confirm that we have reviewed the educational materials, methodology, and intellectual outputs developed within the **Erasmus+ project "Girls4Economy."**

The project represents a valuable contribution to promoting gender equality, entrepreneurship, financial literacy, and career guidance among young women. Through its innovative educational approach, *Girls4Economy* provides practical tools and learning resources that empower female students to develop entrepreneurial thinking, strengthen their economic competences, and increase their confidence in pursuing careers in business, economics, science, and technology.

We highly appreciate the project's emphasis on inclusive education, equal opportunities, and the development of key competences required for the labour market of the future. The methodology encourages active participation, collaboration, critical thinking, and real-world problem-solving, making it highly relevant for vocational and secondary education.

As a technological high school committed to preparing students for successful professional careers, we recognize the **Girls4Economy** methodology as a valuable educational resource that complements modern teaching practices and supports the objectives of the Erasmus+ Programme in fostering innovation, social inclusion, and European cooperation.

We confidently recommend the **Girls4Economy** project and its educational outcomes as an excellent reference for schools, teachers, and educational stakeholders interested in promoting entrepreneurship, financial education, and women's participation in the economy.

Sincerely,

Mera Olimpia Lucia
Principal
Alexandru Borza Technological High School
